Summary

Soon to be software engineer with varied technical skills in software development and web development. Versatility, autonomy and quick learning are some of my main upsides; I am always up for a new challenge.

Experience

2013-2015 — **Full Stack Web Developer**

Osedea

As a fullstack web developer, my tasks were to design various web apps architecture, create APIs to provide data to the frontend, build the web apps interactions with the users and deploy those apps on our Digital Ocean droplets.

2001-2015 — **Full Stack Web Developer**

Freelancer

As a freelancer in web development, I had to deal directly with the clients to get their real needs. Having those, I was able to build robust web sites and CMS to let the clients update their site.

2012-2013 — **Analyst Programmer**

Giro

As an analyst-programmer, my tasks were to analyse and fix different aspects of one of the main application known as Acces. I did lots of bug correction, but also new developments on the application using in-house tools.

2010-2012 — **Junior Software Engineer**

Teledyne Dalsa

As a junior software engineer, I participate in design and implementation of desktop and embedded software.

Education

2008-2012 — **Bachelor's Degree**

École de Technologie Supérieure, Montreal, Quebec, Canada

Software Engineering
